

# T-110.6220: Malware Analysis and Antivirus Technologies

Antti Tikkanen, F-Secure Corporation

**F-SECURE®**

**BE SURE.**

# Introduction

The course teaches students what malicious code is and how it can be detected and analyzed.

Topics of the course include

- Reverse engineering and debugging malware
- Unpacking and decrypting malware
- Windows with an antivirus perspective
- Antivirus engine basics
- Spyware and mobile malware

This course includes a homework project that requires programming skills

# Course staff

## Lecturer

- Antti Tikkanen, F-Secure Corporation

## Assistant

- Laura Takkinen

## Visiting lecturers from F-Secure

- Mikko Hyppönen
- Gergely Erdelyi (reverse engineering)
- Jarkko Turkulainen (unpacking)
- Jarno Niemelä (mobile)
- Stefan Lundström (spyware)

# Course information

Lectures Wednesdays at 16-18 in lecture hall TU1 (TUAS building)

- A few exceptions, see the web page
- All lectures (as well as all other material) are in English

To pass this course, you must complete:

1. three homework rounds
2. the course project

Grade based on points from homeworks and project

# Prerequisites

1. T-110.4100 Computer networks
2. T-106.1220 Data Structures and Algorithms
3. Basic understanding of Windows OS or other OS internals  
(e.g. "T-106.5150 Operating Systems Project")
4. Computer architecture  
(e.g. "S-87.3190 Computer Architecture")
5. C or Assembly programming skills

# Course material

The Art of Computer Virus Research and Defense

Peter Szor (Author)

ISBN 978-0321304544,

Addison-Wesley Professional, 2005

We won't go through all of the book, but lecturers will refer to it quite often for additional information.

## Course material (tools for homeworks)

### IDA Pro 4.9 Disassembler and Debugger

- <http://www.hex-rays.com/idapro/idadownfreeware.htm>

### OllyDbg 1.10 Debugger

- <http://www.ollydbg.de>

### Debugging Tools for Windows

- <http://www.microsoft.com/whdc/devtools/debugging/default.msp>

You can freely install these to your own machines as well!

# Contact information

## Course web page:

- <http://www.tml.tkk.fi/Opinnot/T-110.6220/>

## Mailing list

- T-110.6220@tml.hut.fi (both lecturer and assistant)

# Signing up

By e-mail, see instructions here:

- [http://www.tml.tkk.fi/Opinnot/T-110.6220/2008/sign\\_up.html](http://www.tml.tkk.fi/Opinnot/T-110.6220/2008/sign_up.html)

We can only accept 40 students

- If needed, we'll prioritize based on completed pre-requirement courses and your study programme

**Deadline for sign up is Sunday 20<sup>th</sup> January at midnight!**

# More about course content

**We have three important themes:**

- 1. Reverse engineering (RE).** The process of discovering the technological principles of a device, object or system through analysis of its structure, function and operation (Wikipedia).
- 2. Windows.** To understand the sample you are reversing, you need to understand the environment (the OS) at a low level.
- 3. Antivirus technologies.** We focus on the classical part of client side technology, the file scanning engine.

# Homeworks

The course includes three individual homework assignments

1. Reverse engineering with IDA Pro
2. Debugging with OllyDbg/WinDbg
3. Malware taxonomy and malware in 2008

We will have a lab session to introduce the tools (TBA)

- Not mandatory, but very warmly recommended to pass the homework

Detailed descriptions published later

You will not be handling real malware!

# Homework #1

The screenshot shows the IDA Pro interface with the assembly view selected. The code is as follows:

```
.text:00403E5F      align 10h
.text:00403E60
.text:00403E60 ; ----- SUBROUTINE -----
.text:00403E60
.text:00403E60 ; int __stdcall sub_403E60(void *Dst,char)
.text:00403E60 sub_403E60      proc near                          ; CODE XREF: sub_40BD19+70↓p
.text:00403E60
.text:00403E60 Dst          = dword ptr 4
.text:00403E60 arg_4        = byte ptr 8
.text:00403E60
.text:00403E60      push     ebx
.text:00403E61      mov      ebx, [esp+4+Dst]
.text:00403E65      cmp      ebx, 0FFFFFFFh
.text:00403E68      push     esi
.text:00403E69      mov      esi, ecx
.text:00403E6B      jbe      short loc_403E72
.text:00403E6D      call    sub_4139E2
.text:00403E72
.text:00403E72 loc_403E72: ; CODE XREF: sub_403E60+B↑j
.text:00403E72      mov      eax, [esi+18h]
.text:00403E75      cmp      eax, ebx
.text:00403E77      jnb     short loc_403E92
.text:00403E79      mov      eax, [esi+14h]
.text:00403E7C      push     eax ; MaxCount
.text:00403E7D      push     ebx ; Dst
.text:00403E7E      mov      ecx, esi
.text:00403E80      call    sub_403FF0
```

# Homework #2

**\* OllyDbg - fspeepd.exe - [CPU - main thread, module fspeepd]**

Analysing fspeepd: 2141 heuristical procedures, 10 calls to known functions

Paused

# Course project

Topic: Designing and implementing an antivirus engine

- Details given on the lecture of Wednesday 9<sup>th</sup> April

Submission will include

1. Source code of the engine  
(we like C/C++, but you can go for Java or Python as well)
2. A short whitepaper explaining the solution
3. A demo session

This is also an individual assignment

# Fighting Online Crime

F-Secure's CRO Mikko Hyppönen gives our first real lecture

## Fighting Online Crime

- Who is the enemy? Where is he from?
- How money is being made with malware
- How modern antivirus labs work
- Where do we find the new samples
- How do we analyse them
- How to locate the criminals

**Tuesday 22nd January in T1, 16-18**

# Questions?
